

**IN THE SPECIFICATION:**

Please add the following paragraph after paragraph [0057] in the published application:

FIGS. 19A-19E are views illustrating the connection of the clamping mechanism and the gimbal mechanism.

Please replace paragraph [0077] in the published application with the following amended paragraph:

[0077] A rotation spindle 26 is rotatably retained in a U-shaped spindle section 29b of spindle housing 29. Attachment clip 24 is fixably retained in an outer end of rotation spindle 26, as will be explained. A spring 24a is formed on an outer end of attachment clip 24 on the gimbal mechanism 3 and release-ably snap-fixes into clip-lock release 13 on a desired handle portion 6 of the clamping mechanism 2, as shown in FIGS 19A-19E. As illustrated, FIG. 19D is a sectional view along line III-III of FIG. 19C. A hole 24b formed in an inner end of attachment clip 24 fixably retains attachment clip 24 in rotation spindle 26 by engaging a projection (not shown) during an assembly.
